

Robot Lawn mower with Docking Station

Now you can mow your lawn while running errands, lying in a hammock, or reading the paper! The Robomower is an automatic lawn mower that can handle any garden a traditional gas or electric walk mower can handle, regardless of the shape and slopes of the garden, obstacles and type of grass. This updated version comes with a docking station: When the Robomower completes the designated mowing area, it returns to the docking station automatically to recharge.

Using the included perimeter wire, create an outline of your yard. The wire may be buried if you prefer. Using the easy-to-program LCD screen, set up a regular mowing schedule, including the hours and mowing duration, and set up the docking station. The Robomower departs at your set time of the day and returns for charging, all by itself, for a fully automatic solution to lawn maintenance.

Manual mowing is also possible, ideal for trimming small areas. Having two or even three zones does not affect the efficiency of the Robomower, which gives you the ability to control the operating time for each zone independently, up to four different zones.

Model: SH-349

Part#: Smarthome 32562

Features

- Self-operating lawn mower requires no user interference.
- Unit automatically goes back to recharging station upon completion of mowing.
- Safe, quiet and environmentally friendly.
- Easy-to-program LCD screen, set up a regular mowing schedule.
- It returns to the docking station automatically to recharge
